## ABOUT US

Beauty of time

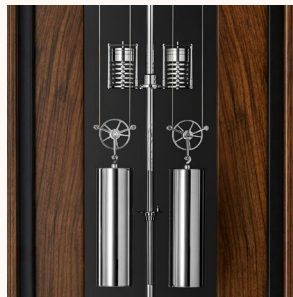

### MANUFACTORY & TRADITION

Erwin Sattler GmbH & Co. KG is a distinguished German clock manufactory based in Gräfelfing near Munich. Since 1958, this family-run company has stood for the highest precision, exceptional craftsmanship, and uncompromising quality. Furthermore, the company is characterised by its international distribution network as well as its responsible and sustainable business practices.

### EXTENSIVE PRODUCT RANGE

In our manufactory, our highly skilled team creates exquisite precision pendulum clocks, regulator pulley clocks, table clocks, wristwatches and watch winders. Our timepieces are treasured companions, designed to be proudly passed down to future generations. Many of our models are also produced in limited and individually numbered editions, further enhancing their exclusivity and appeal to collectors. We deliberately manufacture only small quantities in order to meet our own exacting standards as well as those of our discerning clientele.

## CRAFTSMANSHIP & QUALITY

Precision and craftsmanship guide everything we do. Using state-of-the-art manufacturing technology and with in-house production covering approximately 90% of the movement components, we ensure that every part meets the very highest quality standards. One of our complex movements can require up to 601 parts. The majority of the necessary components are produced in our in-house machining department. The parts are then finished by hand. Our clockmakers then assemble the individual components into the movement. In our in-house measurement and testing laboratory, we check the function and precision of our clocks and watches to ensure they meet the highest quality standards. The hand-painted moon discs and hand-polished, blued hands highlight the unique craftsmanship of Erwin Sattler. Our precision pendulum clocks are renowned among clock and watch connoisseurs worldwide for their exceptional precision and accuracy.

## LANDMARK & VISION

In front of the manufactory in Gräfelfing stands the Monumentum Temporis, a twelve-metre-high precision pendulum clock featuring a 160 cm regulator dial, a visibly illuminated gear train, 36 stainless steel ball bearings, and a temperature-compensated pendulum. It was created to mark the company's 50th anniversary in 2008 and remains to this day the house's landmark. Our aim is to bring joy to people through extraordinary timepieces and to create spaces that are both functional and inspiring. We strive to set global standards in precision, design and quality. For over 60 years, we have been building "clocks for generations" – a promise that drives and inspires us to continually achieve peak performance. In doing so, we seek to stand as a brand for excellence, technical perfection and the continuous advancement of the art of clockmaking.
